Lab 3: Neuro - Measurement Station 2

Grego & Peti

October 30, 2025

Task 1: Series Resistor Measurement

Rs = 2.17 kOhm (multimeter measurement), Rsmd nominal: 4.701 kOhm. Assembled circuit with Rs in series with Rsmd. Rsmd measured: 4.663 kOhm. Value close to nominal, circuit validated. Code and circuit functioning.

Visuals

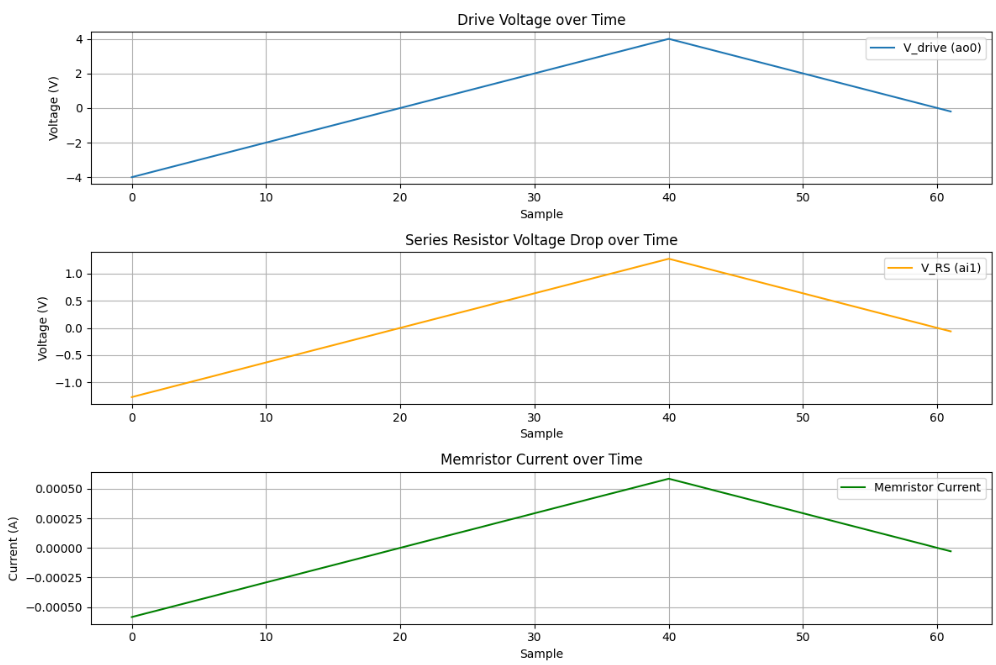

Figure 1: Task 1: Time Series Plot

Task 2: I(V) Curve Measurement

Observed expected I(V) curve with characteristic jumps. Using the row1 col3 memristor on the sample.

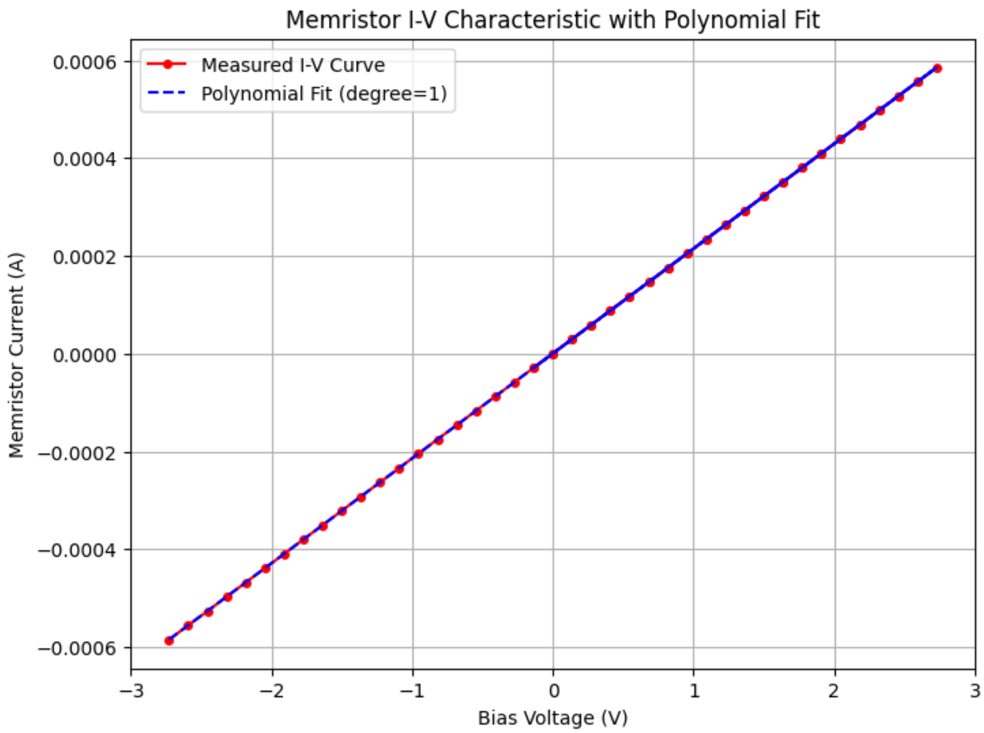

Figure 2: Task 1: Fit Plot

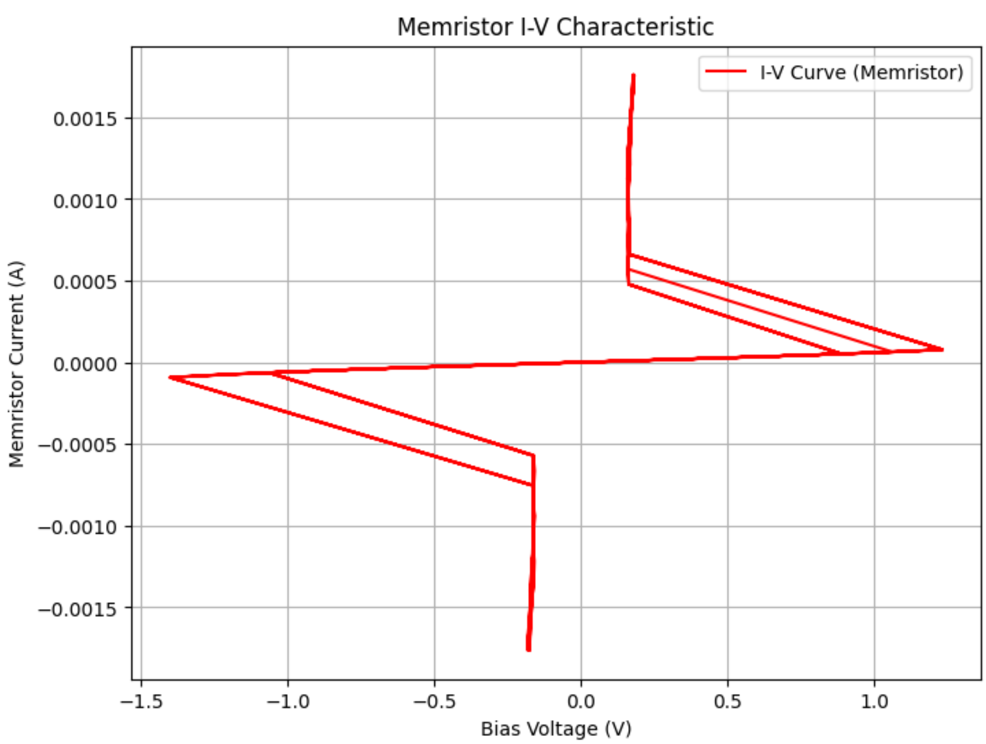

Figure 3: Task 2: Memristor I(V) Curve

Task 3: R(T) Characteristics Measurement Setup

User interface, VISA/SCPI control, and data acquisition setup completed for R(T) measurements. Calculations for sample resistance and temperature implemented. Data logging and plotting updated. Power supply ON/OFF controls added. Remember to update the 'PeltierPowerSupplyVisaResource'.
